Summary

This guide describes how to use the autohotkey script to withdraw invitations from the invitation manager on linkedin. The name of the file is "LinkedIn Withdraw". The file can be edited to alter the number of invitations to withdraw each run. As of written, the script will withdraw 100 withdraws on 10 pages, totaling 1000 withdraws. There will be a section at the end that describes how to edit this number of withdrawals. The process runs at an average speed of 14~15 minutes per page (100 withdraws/page).
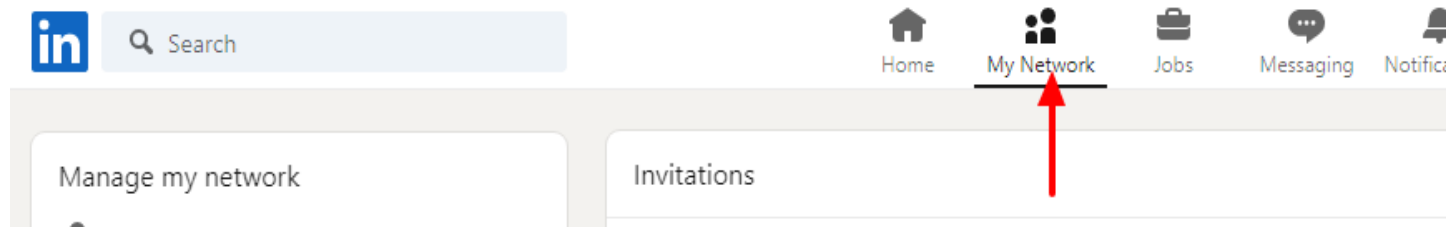

Requirements

- Autohotkey program must be downloaded on the computer running the script.

- Advisor's account login information for LinkedIn can be found in this spreadsheet.

- This autohotkey file will be used to withdraw the invitations.

[This space left intentionally blank]

Instructions

1. After you download the script, run the program by double clicking.
2. Log into the LinkedIn account you want to withdraw invitations from.
3. At the top of the page, navigate to "My Network"

4. Click on "See All"
5. Then, go to "Sent" and then "Events"

6. Once you are on a page that looks like this, go to page 15. This is because we want to withdraw invitations that are at least two weeks old.
7. Once you are on a page that is greater than 15, you will be able to run the script.

8. Start the script by pressing Ctrl + "J" on your keyboard
9. You can stop the script anytime by pressing Ctrl + "X" on your keyboard
10. The script will run by withdrawing 100 invitations before going to the next page.
11. The script will stop after going through 10 pages.

12. The script will display a message showing how many invitations were withdrawn at the end.

13. If you wish to edit the script, right click on the file and open with Notepad are a similar program.

```
Loop, 10                                    ;Number of Pages

{

sleep, 5000
        Loop, 100                           ;Per Page total # of Withdraws

        {
```

14. You can change the number 10, to equal the number of pages you want to change and change the number 100 to equal the number of withdrawas per page.

Notes

Below are some of the reasoning for this process. Please add any notes to this section as needed.

● The reason this program was necessary was to reduce the number of invites sent out from an advisor's linkedin account.
● The process of withdrawing an invitation one by one is automated using a search function and through the use of nested loops.

Checklist

- ☐ Log into LinkedIn Account
- ☐ Go to "My Networks"
- ☐ Go to "See All" next to invitations
- ☐ Click on "Sent"
- ☐ Click on "Events"
- ☐ Go to page 15
- ☐ Run Autohotkey program
- ☐ Press Ctrl + J to begin
- ☐ Press Ctrl + X to terminate
